

Andrzej Ziemiński

Warsaw

We first met in Warsaw in the early 1970's when he was working in Andrzej Wróblewski group

Memories of guided tours of Warsaw and surroundings

Physics in the 1970's

Collaborated on Bubble Chamber Experiments

Coauthored about 10 papers

Authors ranged from 15 to 23, which we thought was a lot!

Seattle

Visiting Scientist about 1975
In Nucl. Phys. B124 (1977) he
appears as a Seattle author

Received 28 February 1977

The inclusive production of neutral particles are studied in π^-d interactions at 205 GeV. Topological distributions for the inclusive reactions $\pi^-d \rightarrow \gamma + d$, $\pi^-d \rightarrow K_S^0 + x$, $\pi^-d \rightarrow \Lambda + x$ and the cross section for $\pi^-d \rightarrow \bar{\Lambda} + x$ are presented and compared with π^-p and pp interactions at 100 and 205 GeV. The effects of double scattering are studied and π^-n inclusive distributions are obtained and compared to results from π^-p interactions (in hydrogen) at 205 GeV.

1. Introduction

We present results on inclusive neutral particle production in π^-d interactions at 205 GeV. Data are derived from a 70 000 picture exposure of the FNAL 30 inch

* Work supported in part by the National Science Foundation and ERDA.

† Visitor from the Institute of Nuclear Physics and the Institute of Nuclear Physics and Technology of the Academy of Mining and Metallurgy, Krakow.
